

WRKC Offers Live Scoring Feed

The WRKC timing and scoring team would like to offer club members a real time feed of our racing action to those having Apple, Android, or Windows phones or tablets. This feed is only available on the track grounds during racing. We did have a display on a 21 inch monitor available last qualifying session but unfortunately, without an outdoor backlit display, this option is not going to cut it as it was impossible to see in the sun. So we've decided to open this up to all members with their high tech gadgets. This is NOT a free app and much be purchased by each individual for \$4.99. I have tested that the signal can be picked up from most of the grandstand area (limited at the north end close to the ramp) as well as along the fence towards corner 1. The Wi-Fi router is located up in the scoring tower.

For more information on the application prior to purchasing, please visit <https://www.race-monitor.com/>

This is a very cool app and will allow you to also monitor live racing action around the world where they have live updates to MyLaps, Westhold or MotoSponder timing systems. I have recently used it to monitor the last ECKC karting event and other national events.

WRKC cannot offer live feed from offsite of the pit area because we do not have an Internet connection from the grounds of Flamboro Speedway to upload live data.

Steps to use this Race Monitor app at WRKC events

1. Install the app on your device from home
2. Prior to the **first heat**, the Wi-Fi password and RMonitor IP address will be posted on the whiteboard at the Blue Bin. If you don't know what this is, please ask your child for help !
 - Connect to this Network for Race Monitor connection only.
 - This Wi-Fi does **NOT** have access to the Internet
 - If you need to update your Facebook status, you will need to turn off the Wi-Fi or walk out of range of the Wi-Fi signal to force your connection back to your service provider to access the Internet.
 - To return to Race Monitor, reconnect to the WRKC Wi-Fi and the application will return to live feed.
3. Open the Race Monitor app and from the Menu tab, Select Direct Connection
 - Enter the RMonitor Address from the white board (eg 192.168.1.101 - this will change every race day)
 - Port Number 50000
 - Select Connect

☺ The feed will update automatically with each class and heat change on the scoring system.

☹ You cannot go back and replay or save any data (Other then taking a picture of your screen, sorry)

😊 Fastest lap of the session will be highlighted with a purple background.

😊 Green lap time indicates fastest lap for that competitor.

👉 Top right options allow you to view by fastest time or by position on the track.

👉 All results are UNOFFICIAL, official results will be posted on the bin following the heat with applicable penalties applied.

✂ If you walk out of range of the Wi-Fi signal, the screen will freeze and may produce a connection error.

Hope you enjoy this new feature !
